

Upper Crooked River Prototype Subbasin Review

Issues/Collaboration Questionnaire

Please review the attached excerpts regarding the goals and expectations for Subbasin Review and then take a moment to complete the questionnaire. Your time in completing this questionnaire will be helpful in carrying out the intergovernmental collaboration process for this review. Upon completing this questionnaire, please return it to John Swanson, Prineville District, Bureau of Land Management, P.O. Box 550, Prineville, OR 97754.

1. Your Name _____ Phone Number _____

2. Agency/Government You Represent _____

3. Are you interested in participating in this collaboration process? _____

4. Could you or one of your associates attend an initial collaboration meeting with us during the week of January 19th? _____ If so, what days are you or he/she available during that week? _____. Would a daytime or evening meeting work best for you? _____

5. The following questions relate to the Upper Crooked River Sub-Basin. In forming your answers, please think in terms of the Sub-Basin area as a whole - not individual watersheds or smaller areas. An example of a Sub-Basin level issue/opportunity could be noxious weeds, which occur throughout this Sub-Basin and pose widespread ecological and economic risks there. Examples of issues or opportunities that do not qualify as Sub-Basin level issues or opportunities include those of a site-specific nature, such as the development of a campground; improvement of a particular stream channel, or preparation of a timber sale in a given area.

This information will help us formulate an initial list of sub-basin issues and opportunities.

a. What do you feel currently poses the greatest risks to natural resource or socio-economic health and functioning within this Sub-basin? _____

b. What do you feel are the greatest opportunities to reduce these risks and/or maintain or implement scientifically sound, ecosystem-based management? _____

6. What things can we provide to you now to help you prepare for this prototype collaboration effort?

7. Can you suggest other governmental participants whom we should contact? If so, please list.

Thank you.
